

Tech in Action: Telemedicine

Improving Access & Efficiency of Care via Video

Let's face it, it's not always easy to see a doctor.

From booked schedules to crowded waiting rooms, the hassles of getting an appointment often deter patients from seeking help. Compunetix video solutions break this routine by expanding access beyond the doctor's office and allowing patients and physicians to effortlessly connect face-to-face from anywhere, at any time.

Compliance

Discovering the Benefits

Adding Convenience:

Convenience impacts healthcare. As it increases, so does the likelihood that a patient will seek care for an ailment before it becomes more severe. Compunetix video technologies make it easy for patients to get advice right when they need it. After all, what's more convenient than seeing and speaking to your doctor from the comfort of your home?

Rates

Better Utilizing Resources:

Doctors and nurses are scarce resources. Their knowledge and expertise are invaluable, but they are only able to see a finite number of patients per day. Video solutions help alleviate the strain on the workforce by allowing healthcare networks to serve large volumes of patients, without sacrificing quality of care. Physicians can quickly evaluate patients via video to determine the best course of treatment or whether a more extensive examination is needed.

Building the Solution

- **Customized to Meet Your Needs:** Compunetix video deployments fulfill wide-ranging requirements across the medical field. Ask us how our solutions can be tailored to meet your needs.
- **Eliminate Reliance on 3rd Party Services:** Compunetix telemedicine solutions bring the technology in-house, cutting your reliance on expensive third-party service providers.
- **Keeping Patient Information Secure:** Compunetix solutions incorporate encrypted video to ensure doctor-patient conversations are kept confidential and secure.

Benefits to Healthcare

- **Reducing Unnecessary Visits to the ER:** Patients with easy access to their doctors are less likely to go to the Emergency Room for minor medical issues. By enabling physicians to provide prompt medical advice via video, providers can quickly serve the needs of non-emergency patients and simultaneously free ER resources to focus on true emergencies.
- **Reducing Hospital Readmission Rates:** Preventable rehospitalization is costly and damaging. Our video technologies enable doctors and nurses to effortlessly check-in with patients, answer questions, and provide face-to-face follow-up care from anywhere. When discharged patients receive comprehensive care, the odds of readmission decrease.
- **Improving Management of Chronic Conditions:** It's not always easy for patients with chronic diseases to travel back and forth to the doctor's office. Video solutions eliminate the hassle by providing an alternative means to monitor and treat their ongoing needs.
- **Virtual Visiting Nurses:** Visiting nurses provide vital services for home health care patients. When video technologies are incorporated into the mix, nurses can provide everything from speech therapy and mental health support to remote monitoring and proactive care while maintaining a high level of service and delivering cost savings.
